

AV-1TAS-TC BANNER TARGET

Air-to-air banner target used for gunnery training, made of highly resistant nylon mesh, a towing triangle and a stabilizer mast. With a round central target in black for long-distance visibility.

DESCRIPTION

- Developed to operate without the use of the air-target container AV-CAA, as the carrying aircraft can take-off with the open target directly from the ground.
- Its nylon mesh allows training with 50mm and 7.62mm projectiles.
- Can be used in a wide variety of combat aircrafts.
- The target can be recovered and may be re-used depending on the number of hits and the ground operating area conditions.

OTHER VERSION:

AV-1TAS-EJ: developed to operate with the use of the air-target container AV-CAA.

Dimensions: Banner length: 10.0m; Banner width: 1.82m
Total weight: 12 kg
