

AV-2TAE-BR BANNER TARGET

Air-to-air banner target used for gunnery training. Made of high-resistant nylon mesh, a towing triangle and a fiber glass stabilizer mast, which incorporates a radar reflector.

DESCRIPTION

- Developed to operate with the use of the air-target container AV-CAA.
- In two versions of color (red or white) for the use in different geographic, weather and visibility conditions.
- Its nylon mesh allows training with 20mm and 30mm projectiles.
- Can be used in a wide variety of combat aircrafts.
- The target can be recovered and may be re-used depending on the number of hits and the ground operating area conditions.

OTHER VERSION:

EQ-2TAE-R : developed to operate without the use of the air-target container AV-CAA.

**Dimensions: Banner length: 10.0m; Banner width: 1.84m
Total weight: 31 kg**
