

AV-CAA

AIR-TARGET TRANSPORTATION CONTAINER

Air-target transportation container made of aluminum and developed to carry, launch and tow the air-to-air targets as well as to release the system at the end of the mission. The AV-CAA is installed using the NATO standard 14" suspension system of the towing aircraft.

DESCRIPTION

- Can carry different types of air-targets and different lengths of towing cables.
- Compatible electric circuit and cockpit control allowing the container to be used in a wide variety of combat aircrafts.
- Reliable electrical system, using MIL-STD components.
- Can be used in combination with another container increasing the mission efficiency.
- Safe operation with dual pyrotechnic system for ejecting and releasing the air-target.

Dimensions: Total length: 2,765 mm; Diameter: 480 mm
Empty weight: 89 kg
